### WESTERN RED CEDAR

The warmth, beauty, and durability of Western Red Cedar make an unmatched statement of quality and elegance. Western Red Cedar possesses physical properties and characteristics unsurpassed by any other softwood species. It has exceptional dimensional stability with minimal tendency to shrink, swell, cup, twist, or warp under even the most extreme weather conditions. The durability of Western Red Cedar is superior to all other domestic softwoods. Its natural composition resists moisture, decay, insects and other natural elements that can quickly damage other softwood species. Western Red Cedar is exceptionally workable, with superior ability to be sawn, take nails, glue and other fasteners.
